

World Space Week 2020

Satellites Improve Life.

We started our week learning about satellites and their uses in our class assembly and in guided reading. We painted satellites in space and researched their component parts so we could construct our own model satellites. We learned that the moon is a natural satellite so we made the different moon phases (shapes) out of Oreos and we learned why the moon looks different throughout each month. We modelled the planets out of playdoh using maths skills to cut it into fifths. This clearly showed us how the planets compare in size to each other. We also wrote letters to astronauts at NASA—we hope they will reply!
